

Options Screener

Data-Driven Trade Evaluation Platform

Evaluate options trades with transparent, configurable scoring. Set tolerances for ROI, Delta, Beta, and DTE; see per-trade breakdowns, meaningful penalties, and executive-ready suggestions (Conservative / Neutral / Aggressive).

Key Features

- Configurable tolerances
- Min ROI, Max Delta/Beta/DTE
- Meaningful penalties for exceedances
- Transparent scoring breakdown
- Per-metric points & deductions
- Clear final score & suggestion
- Fast evaluation & export
- CSV for analysis and review
- Production-ready REST API

Workflow

1. Configure Tolerances	Set Max Delta/Beta/DTE and Min Annual ROI.
2. Enter Trades	Symbol, dates, strike, bid, beta, delta, optional support.
3. Evaluate	One-click scoring with per-trade breakdown table.
4. Export & Review	CSV export for backtesting, oversight, or sharing.

Scoring Overview

Base weights emphasize ROI and risk control; **exceedances** trigger meaningful penalties so user tolerances hold weight.

Component	Weight	Notes
Annual ROI (min)	35%	Hard fail if below min ROI; otherwise scored proportionally.
Delta (max)	25%	Full points at/below max; proportional above threshold.
DTE (max)	15%	Encourages shorter exposure within policy limits.
Beta (max)	5%	Favors lower beta underlyings for stability.
Collateral at Risk	10%	More points for lower per-contract collateral.
Support Variance	10%	Optional bonus if provided (e.g., support \geq 10%).

Suggestion bands: ≥ 90 = Conservative; 70–89 = Neutral; < 70 = Aggressive.
